# Get going

From scattered, ad hoc AI use to something that holds together. How to start for real — without a big project.

**In brief.** You're already using AI — just **ad hoc** and **scattered**, with no overview. You want to start for real. But scattered use **never adds up** to value; it needs a spine of **your own concepts** and one owner.

## 01 THE PICTURE YOU KNOW

You never decided to use AI. But you do anyway. People in the house use ChatGPT and the like on their own, for their own tasks, without asking. It's **ad hoc**, **scattered** and unofficial. And you can see there's something there — you just want to start for real.

## 02 WHY AD HOC ISN'T ENOUGH

Scattered use looks cheap. It isn't. No one knows who uses what, for what, with which data. Sensitive information can walk **out the door** without a trace. Two employees ask the same question and get two answers — and neither can be checked against your own rules.

And most important: it **never adds up**. Twenty private shortcuts never become one capability the organization can trust. Because nothing is tied to **your own concepts**.

**Scattered use never adds up.**

## 03 GETTING GOING ISN'T A BIG PROJECT

You don't need a two-year transformation to start. You need a spine under the use that's already there.

### A SYNTHETIC EXAMPLE

- → At a mid-sized company, half the staff already use AI — privately, **scattered**, with no overview.
- → Leadership wants to start for real and considers a big purchase.
- → Instead they took **one area** — writing quotes — and gave the agent the company's own concepts and one owner.

→ The **scattered** use got a spine. The rest could build on it instead of starting over each time.

## 04 THE WAY FORWARD

Map where AI is already used in the house — without hunting anyone. Pick **one area** to do right first. Give it your concepts and an owner. Then you're going for real, and the **scattered** use has a place to gather.

**Check: are you ready to start for real?**

- ☐ Do you know who in the house already uses AI — and for what?
- ☐ Can sensitive data walk out the door without a trace?
- ☐ Do two departments get the same answer to the same question?
- ☐ Is there one area you could do right first?
- ☐ Is the use that's already happening tied to your own concepts?

## 05 LOOPLO SERVICES — WHAT WE TAKE CARE OF

The domains each have an owner. The seams between them have none — those are what we take care of. The coupling is no one's table; we make sure ownership lands in the right place. Here is the full catalogue: five couplings and the gate that makes them raisable.

| LAYER | WHAT THE FIELD GOVERNS | WHAT WE TAKE CARE OF | DELIVERABLE |
|---|---|---|---|
| **I · Data foundations** | Source of record, lineage, consent, field access | The seam between data and the systems that use it | Coupling map with a named owner at every crossing |
| **II · Decision definitions** | Semantic layer, glossary, definition register | The number that means one thing in the boardroom and another in the model | Semantic reconciliation; one definition authority |
| **III · Output controls** | Guardrails, hallucination checks, redaction, review | When an unverified output becomes an acted-on fact | Control chain from output to decision |
| **IV · Agent governance** | Allowed actions, permissions, override, kill switch | What the agent may do — vs. who answers when it does | Rights matrix bound to named owners |
| **V · Accountable autonomy** | Risk register, model cards, incident response | When scale outruns ownership | Accountability architecture and board-facing assurance |

| LAYER | WHAT THE FIELD GOVERNS | WHAT WE TAKE CARE OF | DELIVERABLE |
|---|---|---|---|
| **Gate · Psychological safety** | — | An unowned dependency is usually one no one feels safe to raise | The enabling condition for every layer |

## 06 EFFECT AND CONSEQUENCE

**91%** already run agentic AI (EY) — much of it ad hoc, **out of leadership's sight**. More than **one in three AI projects** is expected to be shut down by 2027 (Gartner), often because scattered use never gets a spine. Letting it run unmanaged is also a choice with a price.

**IN SHORT · LOOPLO TAKES CARE OF THE COUPLING**

You're already going — just ad hoc. Give the scattered use a spine: one area, your concepts, one owner. — book a short meeting at cal.com/jacobfalkentorp.
